ACT. = PTAB's audited tonnage, prior weeks corrections may cause the sum of the week columns to be different (not equal to) the YTD column.

ST. EST. = PTAB's actual inspections multiplied by an estimated average net weight

PROJ. = PTAB's field department estimates multiplied by an estimated average net weight

EST. = Westcon Foods' adjusted estimate

How to read the report:

The report consists of two pages outlining the raw tomato tons packed per week during the California Processed Tomato Harvest.

The first page is a bell curve report showing harvest start, ramp up to peak and ultimate conclusion. The second page is the hard data numbers used for the first page bell curve visual.

Page One of report:

The lines within the graph represent the harvested tons processed during the tomato pack. They outline the harvest start date, the ramp up to full capacity, and the descent of weekly tonnage to the pack's final conclusion. The multi colored (green, orange, blue, and red) is the current pack.

Green represents actual tonnage packed. Orange is the estimate PTAB (Processing Tomato Advisory Board) has given for the week based on information from the field. The blue is what PTAB is projecting will occur and the red is Westcon Foods' estimate for the remainder of the pack.

Page Two of the Report:

This report is the hard data of the current pack as well as previous pack years; 2009 through 2013. The numbers running vertical on the left are the weeks of the harvest.

The verbiage to the immediate right of that are the descriptors of the horizontal line numbers, and the balance of the vertical lines are tonnage numbers and percents to date.

This allows you to compare the current pack's progress against previous years.
